

El Camino College
COURSE OUTLINE OF RECORD - Approved

I. GENERAL COURSE INFORMATION

Subject and Number: Chemistry 4
Descriptive Title: Beginning Chemistry
Course Disciplines: Chemistry
Division: Natural Sciences

Catalog Description:

This course introduces the principles of chemistry, modern concepts of atomic structure and periodicity as a basis for understanding bonding, chemical formulas, chemical equations and chemical reactions, states of matter, important elements and their compounds, solutions, acid-base theories and reactions, net ionic equations, oxidation-reduction, kinetics and chemical equilibrium, chemical nomenclature and calculations. In the laboratory, emphasis is on observations, measurements, and elementary quantitative experiments with an introduction to qualitative analysis.

*Note: The maximum UC credit allowed for students completing Chemistry 4 and Chemistry 20 is one course. Students will not receive UC credit for Chemistry 4 if taken after Chemistry 1A.

Conditions of Enrollment:

Prerequisite: Mathematics 80 with a minimum grade of C or equivalent or qualification by testing (El Camino College Mathematics Placement Test) and assessment

Recommended Preparation: eligibility for English 1A

Course Length: X Full Term Other (Specify number of weeks):

Hours Lecture: 5.00 hours per week TBA
Hours Laboratory: 4.00 hours per week TBA
Course Units: 5.00

Grading Method: Letter
Credit Status: Associate Degree Credit

Transfer CSU: X Effective Date: Prior to July 1992
Transfer UC: X Effective Date: Prior to July 1992

II. OUTCOMES AND OBJECTIVES

A. COURSE STUDENT LEARNING OUTCOMES (The course student learning outcomes are listed below, along with a representative assessment method for each. Student learning outcomes are not subject to review, revision or approval by the College Curriculum Committee)

1. On a written exercise, given the names of chemical compounds, students will be able to write the correct reactant formulas, states of matter (when required), identify reaction type, predict the product formulas and balance the chemical equation.

Objective Exams

2. Students will be able to create (via molecular models or drawings) accurate representations of compounds. The representations will contain appropriate bonds, lone pairs, and geometry.

Quizzes

3. Students will adhere to safety protocol in the laboratory regarding eye protection. Students will follow the proper procedure regarding wearing goggles in the laboratory, and keeping them on to protect their eyes.

Lab Reports

The above SLOs were the most recent available SLOs at the time of course review. For the most current SLO statements, visit the El Camino College SLO webpage at <http://www.elcamino.edu/academics/slo/>.

B. Course Student Learning Objectives (The major learning objective for students enrolled in this course are listed below, along with a representative assessment method for each)

1. Utilize the language of chemistry, including vocabulary, symbols, formulas, and equations.

Objective Exams

2. Compare and contrast physical properties, physical changes, chemical properties, and chemical changes.

Essay exams

3. Analyze and solve quantitative problems, including stoichiometry, percent yield, energy and change of temperature, gas laws, the ideal gas equation, Dalton's law of partial pressures, percent abundance of isotopes, density, solution concentration, and colligative properties.

Objective Exams

4. Compare and contrast ionic and covalent compounds. Evaluate bonding based on the chemical formula, and then correlate compound properties with the structure and types of bonding present.

Quizzes

5. Given one or the other, generate names or formulas for elements, ions, and compounds.

Completion

6. Differentiate between five reaction types: combination, decomposition, single replacement, double replacement, and complete oxidation. Given a set of reactants, diagnose the reaction type and predict the products.

Objective Exams

7. Solve problems and express answers in scientific and decimal notation with correct units and significant figures. Use logarithms to convert among pH, pOH, $[H^+]$, and $[OH^-]$.

Objective Exams

8. Correlate spontaneity of oxidation-reduction reactions with standard reduction potentials of reactants.
Multiple Choice
9. Predict the direction of equilibrium shift in equilibrium processes, given a change in concentration, temperature, or volume of substances involved.
True/False
10. Demonstrate basic laboratory skills, including making, recording, and evaluating observations of chemical systems.
Laboratory reports
11. Evaluate volumetric laboratory glassware for the correct significant place to be read and record volumes correctly. Evaluate quantitative experimental data, and infer the presence or absence of specific ions in an unknown mixture.
Laboratory reports

III. OUTLINE OF SUBJECT MATTER (Topics are detailed enough to enable a qualified instructor to determine the major areas that should be covered as well as ensure consistency from instructor to instructor and semester to semester.)

Lecture or Lab	Approximate Hours	Topic Number	Major Topic
Lecture	3	I	Matter and Energy A. The Scientific Method B. Physical and chemical Properties C. Physical and Chemical Changes D. Mixtures E. Laws of Conservation of Mass and Energy
Lecture	3	II	Measurements A. Metric System B. Dimensional Analysis C. Significant Figures D. Units of Energy
Lecture	6	III	Atomic Structure and Periodicity A. Historical Development of the Atoms: Dalton to Rutherford B. Quantum Mechanical Model (n, l, m, s) C. Electron Configurations D. Periodicity
Lecture	7	IV	Chemical Bonding A. Ionic Bonds B. Covalent Bonds C. Lewis Structures D. Geometry of Molecules E. Polarity of Molecules
Lecture	9	V	Inorganic Nomenclature A. Binary Compounds

			<ul style="list-style-type: none"> B. Salts C. Acids and Bases
Lecture	6	VI	<p>Chemical Formula Concepts</p> <ul style="list-style-type: none"> A. Mole Concept B. Molar Mass C. Percent Composition D. Empirical and Molecular Formulas
Lecture	12	VII	<p>Chemical Reactions, Equations, and Stoichiometry</p> <ul style="list-style-type: none"> A. States of Matter B. Balancing Equations C. Classification of Reactions (Combination, Decomposition, Single Replacement, Double Replacement, and Complete Oxidation)
Lecture	5	VIII	<p>Gases</p> <ul style="list-style-type: none"> A. Gas Laws: Boyle, Charles, Avogadro, Combined, Ideal B. Kinetic Molecular Theory C. Dalton's Law of Partial Pressures D. Gas Stoichiometry
Lecture	6	IX	<p>Liquid and Solids</p> <ul style="list-style-type: none"> A. Properties B. Intermolecular Forces C. Dynamic Equilibrium D. Types of Crystalline Solids E. Energy and Phase Changes
Lecture	6	X	<p>Solutions</p> <ul style="list-style-type: none"> A. Characteristics B. Solution Concentrations (Molarity, Molality, Weight Percent) C. Factors influencing Solubility D. Solution Stoichiometry E. Colligative Properties including Molar Mass Determinations
Lecture	10	XI	<p>Net Ionic Equations</p> <ul style="list-style-type: none"> A. Strong, Weak, and Non-electrolytes B. Prediction of Products C. Writing Net Ionic Equations
Lecture	5	XII	<p>Acid-Base Theory and Reactions</p> <ul style="list-style-type: none"> A. Properties B. Acid-Base Theories (Arrhenius, Bronsted-Lowry, Lewis) C. Bronsted-Lowry Reactions D. Lewis Acids and Bases E. pH and pOH
Lecture	6	XIII	<p>Oxidation-Reduction Reactions</p> <ul style="list-style-type: none"> A. Oxidation Numbers B. Relative Strengths of Oxidizing and Reducing Agents C. Balancing Redox Reactions D. Electrochemical Cells

Lecture	5	XIV	Chemical Equilibrium and Kinetics A. Introduction to Kinetics B. Factors that Influence Kinetics C. Introduction to Equilibrium D. Le Chatelier's Principle E. Equilibrium Constant Expressions
Lecture	1	XV	Nuclear Chemistry A. Alpha and Beta Particles B. Applications of Nuclear Chemistry
Lab	72	XVI	Laboratory Experiments and Exercises (Select 13 or more Experiments/Exercises Including all Starred Ones) A. The Laboratory Burner (2 hours) B. *Measurement and the Metric System (3 hours) C. *Observations of Reactions in Aqueous Solutions (3 hours) D. Rates of Chemical Reactions (3 hours) E. *Percent Water in an Unknown Hydrate (3 hours) F. *Common Chemical Reactions (3 hours) G. Charles Law (3 hours) H. *Determination of the Universal Gas Constant, R (3 hours) I. *Acid-Base Titrations (1 or 2 lab periods) (3-6 hours) J. *Conductivity (demonstration) (1-2 hours) K. *Qualitative Analysis (2 lab periods) (6 hours) L. Oxidation-Reduction Reactions (demonstration) (1-2 hours) M. Solution Concentration and Properties (3 hours) N. Nomenclature (2-3 hours) O. *Lewis Structures and Molecular Models (2-3 hours) P. Net Ionic Equations (NIE) Exercise (2-3 hours)
Total Lecture Hours		90	
Total Laboratory Hours		72	
Total Hours		162	

IV. PRIMARY METHOD OF EVALUATION AND SAMPLE ASSIGNMENTS

A. PRIMARY METHOD OF EVALUATION:

Problem solving demonstrations (computational or non-computational)

B. TYPICAL ASSIGNMENT USING PRIMARY METHOD OF EVALUATION:

Solder is an alloy of lead and tin. Nitric acid is used to treat 4.77 g of solder, causing the tin to react: $\text{Sn}(s) + 4 \text{HNO}_3(aq) \rightarrow \text{SnO}_2(s) + 4 \text{NO}_2(g) + 2 \text{H}_2\text{O}(l)$. The NO_2 gas produced has a volume of 1.94 L at 691 torr and 19 °C. Calculate the grams of tin reacted.

C. COLLEGE-LEVEL CRITICAL THINKING ASSIGNMENTS:

1. Using complete sentences, explain from the particulate point of view (kinetic molecular theory) why the pressure of a fixed amount of gas at constant temperature decreases when the volume increases.

2. In the hydrate experiment, examine each experimental error below. Determine how the error would influence the calculated percentage of water. Circle one of the following choices then explain the reason for your choice:

- H means the calculated percentage is higher because of the error.
- L means the calculated percentage is lower because of the error.
- N means the calculated percentage is not affected by the error.

Observed Error

- Some solid material splattered out of the open crucible during heating. (H L N)
- The hydrate was not heated to constant mass. (H L N)

D. OTHER TYPICAL ASSESSMENT AND EVALUATION METHODS:

Essay exams

Other exams

Quizzes

Written homework

Laboratory reports

Homework Problems

Multiple Choice

Completion

Matching Items

True/False

V. INSTRUCTIONAL METHODS

Demonstration
Discussion
Laboratory
Lecture
Multimedia presentations

Note: In compliance with Board Policies 1600 and 3410, Title 5 California Code of Regulations, the Rehabilitation Act of 1973, and Sections 504 and 508 of the Americans with Disabilities Act, instruction delivery shall provide access, full inclusion, and effective communication for students with disabilities.

VI. WORK OUTSIDE OF CLASS

Study
Answer questions
Skill practice
Required reading
Problem solving activities
Written work

Estimated Independent Study Hours per Week: 8

VII. TEXTS AND MATERIALS

A. UP-TO-DATE REPRESENTATIVE TEXTBOOKS

Cracolice and Peters. Introductory Chemistry. 6th ed. Cengage, 2016.
ECC Chemistry Faculty. Chemistry 4 Supplement and Laboratory Manual. ECC Reproduction Center, 2019.

B. ALTERNATIVE TEXTBOOKS

C. REQUIRED SUPPLEMENTARY READINGS

D. OTHER REQUIRED MATERIALS

Scientific Calculator
Department-Approved Safety Goggles

VIII. CONDITIONS OF ENROLLMENT

A. Requisites (Course and Non-Course Prerequisites and Corequisites)

Requisites	Category and Justification
Course Prerequisite Mathematics-80 or	Computational/Communication Skills
Non-Course Prerequisite	In order to succeed in Chem 4, students must have a solid foundation in algebra. Many assignments are quantitative in nature and students are required to set up and solve equations.

B. Requisite Skills

Requisite Skills
<p>Solve linear equations involving one or more variables. MATH 80 - Carry out numerical operations and manipulate algebraic expressions, including expressions with rational and negative exponents, complex numbers, and logarithms. MATH 80 - Solve problems involving a variety of function types, including linear, quadratic, polynomial, rational, radical, exponential, and logarithmic functions. MATH 80 - Solve a variety of equations and inequalities, as well as systems of equations and inequalities, using algebraic and graphical methods. Types of equations include linear, quadratic, polynomial, rational, radical, exponential and logarithmic equations.</p>
<p>Solve an equation involving absolute values. MATH 80 - Carry out numerical operations and manipulate algebraic expressions, including expressions with rational and negative exponents, complex numbers, and logarithms. MATH 80 - Solve a variety of equations and inequalities, as well as systems of equations and inequalities, using algebraic and graphical methods. Types of equations include linear, quadratic, polynomial, rational, radical, exponential and logarithmic equations.</p>
<p>Find the least common denominator of given rational expressions. MATH 80 - Carry out numerical operations and manipulate algebraic expressions, including expressions with rational and negative exponents, complex numbers, and logarithms.</p>
<p>Determine the slope of a line. MATH 80 - Graph a variety of functions and relations and draw connections between these graphs and solutions to problems.</p>
<p>Sketch a line that includes a given point and slope. MATH 80 - Graph a variety of functions and relations and draw connections between these graphs and solutions to problems.</p>
<p>Find the x- and y-intercepts for a given relation. MATH 80 - Carry out numerical operations and manipulate algebraic expressions, including expressions with rational and negative exponents, complex numbers, and logarithms. MATH 80 - Graph a variety of functions and relations and draw connections between these graphs and solutions to problems.</p>
<p>Solve simultaneous equations by both substitution and addition. MATH 80 - Solve a variety of equations and inequalities, as well as systems of equations and inequalities, using algebraic and graphical methods. Types of equations include linear, quadratic, polynomial, rational, radical, exponential and logarithmic equations.</p>
<p>Convert between exponential and logarithm forms given an equation in either format. MATH 80 - Carry out numerical operations and manipulate algebraic expressions, including expressions with rational and negative exponents, complex numbers, and logarithms. MATH 80 - Solve a variety of equations and inequalities, as well as systems of equations and inequalities, using algebraic and graphical methods. Types of equations include linear, quadratic, polynomial, rational, radical, exponential and logarithmic equations.</p>

<p>Write a given sum or difference of logarithms as a single logarithm. MATH 80 - Carry out numerical operations and manipulate algebraic expressions, including expressions with rational and negative exponents, complex numbers, and logarithms. MATH 80 - Solve problems involving a variety of function types, including linear, quadratic, polynomial, rational, radical, exponential, and logarithmic functions.</p>
<p>Use a calculator to solve a given exponential or logarithmic equation. MATH 80 - Carry out numerical operations and manipulate algebraic expressions, including expressions with rational and negative exponents, complex numbers, and logarithms. MATH 80 - Solve problems involving a variety of function types, including linear, quadratic, polynomial, rational, radical, exponential, and logarithmic functions.</p>

C. Recommended Preparations (Course and Non-Course)

Recommended Preparation	Category and Justification
Non-Course Recommended Preparation eligibility for English 1A	

D. Recommended Skills

Recommended Skills
Answer essay questions explaining chemical concepts and principles. ENGL A - Read and apply critical thinking skills to college-level expository prose for the purposes of writing and discussion. ENGL 84 - Select and employ reading strategies to interpret the content of a college-level textbook, with special focus on constructing a thesis statement and providing valid support.

E. Enrollment Limitations

Enrollment Limitations and Category	Enrollment Limitations Impact

Course created by Beginning Chemistry Committee on 09/01/1966.
